

APR 24 2007

AMENDMENTS TO THE SPECIFICATION

Replace the paragraph beginning on Page 8, Line 7 with the following new paragraph:

The bracket 7 and the drive pulleys 3, 3' are advantageously arranged in a central region of the triangles T, T'. Advantageously, the bracket 7 is mounted at the center region of the crossbeam 8. For example, in the first embodiment according to Fig. 2 the feet 7.5, 7.6 of the bracket 7 are mounted at the crossbeam 8 on opposite sides of the car guide 5 and substantially equally spaced from the car guide. For example, the drive pulleys 3, 3' are arranged on the shaft 4 on opposite sides of the car guide 5 and substantially equally spaced from the car guide. As shown in Figs. 2, 3, 5, 7 and 9, the spacing between the drive pulleys 3, 3' is smaller than an axial length of the associated drive motor 1, 1'.
